

Startup Incubator Management System

Team Roles & Task Distribution (Kanban Board)

This document outlines the foundation built so far, followed by the finalized roles and task assignments for the rest of the project.

Phase 1: Completed by Sadman Sakib

Sadman Sakib has already completed 80% of the core architecture and backend logic:

- **Backend Architecture Setup:** Initialized the full Java Spring Boot project.
 - **Database Entities Created:** Designed the core tables: `User` , `Startup` , `PitchDocument` , `Funding` , `Notification` , `MentorProfile` , `MentorAssignment` , and `Evaluation` .
 - **Core APIs Developed:** Built REST Controllers and Services for Authentication, Evaluation, Funding, Mentors, and Startup registration.
 - **Security Configured:** Set up `SecurityConfig` and `WebConfig` for CORS and basic security.
 - **Frontend Scaffolding:** Created the initial HTML structure for `index.html` , `auth.html` , `profile.html` , and Role-Based Dashboards.
-

Phase 2: Pending Task Distribution

1. Sadman Sakib - QA Tester, Content & Deployment Lead

Responsibilities:

- **End-to-End Testing:** Test the entire workflow (Login -> Pitch Submission -> Mentor Evaluation -> Funding) and identify any bugs in the existing system.
- **Data Population:** Create dummy accounts (Investors, Mentors, Startups) and submit sample pitch documents for the final presentation.
- **Frontend Deployment:** Host the final frontend source code on Vercel or Netlify.
- **System Quality:** Ensure all API URLs point correctly to the remote backend server before deployment.

2. Faiza - Frontend UI/UX Designer

Responsibilities:

- **Global UI Theme:** Finalize color palettes, typography, navbar, and footer across all HTML pages.
- **Dashboard Aesthetics:** Improve the layout and add modern aesthetics to the Admin, Entrepreneur, Mentor, and Investor dashboards.
- **Responsive Design:** Ensure all pages look perfect on both mobile and desktop screens using CSS Flexbox/Grid or Media Queries.
- **Form Styling:** Design clean, interactive forms for Pitch Document submission and mentor evaluations.

3. Rifa - Backend Lead & Database Administrator

Responsibilities:

- **Database Setup:** Register and provision a free MySQL database on Aiven or TiDB.
- **Spring Boot Configuration:** Update the `application.properties` with the new remote database credentials.

- **API Maintenance:** Fix any backend API issues or bugs that arise during frontend integration.
- **Backend Deployment:** Host the Spring Boot backend on Render.com or Koyeb and provide the live API link to the team.

4. Tonni - Frontend Logic & API Integrator

Responsibilities:

- **Authentication Setup:** Connect the Login and Registration forms to the backend using JavaScript `fetch()` .
- **Session Management:** Securely save the generated JWT/Auth Token in the browser's `localStorage` after a successful login.
- **Dynamic Data Rendering:** Fetch startup lists and relevant data from the backend to display dynamically on the dashboards.
- **Logic Integration:** Implement the logic for Mentors and Investors to submit ratings/funding via the API.

End of Document. Please track these tasks on GitHub Projects.
